

On the Subject of Simultaneous Simons

More bleeps and bloops than you can shake a stick at.

Note: For the purposes of this manual, a collection of four grouped colored buttons is a "Simon".

- This module is in fact four separate Simons. Four initial lights will be flashing, one for each Simon, corresponding to only one of the below five arrangements. Determine which one you are looking at, and make sure to note the ordering of Simons.

- Using the correct table below, find the color mapping for the first Simon. For each Simon past the first, add 1 to the strike count, eg: No Strikes for 1, 1 Strike for 2, 2 Strikes for 3, etc. If your number of strikes would be equal to or greater than 3, subtract 3 until it's below 3.

If the serial number contains a vowel:

		Red Flash	Blue Flash	Green Flash	Yellow Flash
Button to press:	No Strikes	Blue	Red	Yellow	Green
	1 Strike	Yellow	Green	Blue	Red
	2 Strikes	Green	Red	Yellow	Blue

If the serial number does not contain a vowel:

		Red Flash	Blue Flash	Green Flash	Yellow Flash
Button to press:	No Strikes	Blue	Yellow	Green	Red
	1 Strike	Red	Blue	Yellow	Green
	2 Strikes	Yellow	Green	Blue	Red

Note: Upon pressing any button the flashes will stop. Either memorize or note all the flashes for all Simons before pressing anything.

- Enter the sequence for each Simon on their respective colored buttons. This will cause each Simon to lengthen its sequence by one. Repeat the above steps, using your actual strike count for 1, until the module is complete.
